

# HILLSIDE PUBLIC LIBRARY

## NON-RESIDENT FEE

FY 2013-2014

### General Mathematical Formula

To determine the *minimum* non-resident fee, a local library should divide the library income from local property tax sources or its equivalent by the local population to determine the cost of service per capita. The library should multiply the per capita figure by the average number of persons per household in the community to obtain the average cost per household on which to base a fee for a family card. The most recent federal census information available shall be used in determining population and household size.

#### **Library income from local property tax sources excludes State and federal funds.**

Hillside Public Library Income based on most recent levy:	\$931,388.00
Divided by local population of 8,157 (2010 Census)	\$114.18
Multiplied by average number of persons per household of 2.66 Per non-resident card which covers any size family.	\$304
